

The Electronics Evolution – Energized by Sustainability

What is Evolve?

As the global trade association for the electronics industry, the Global Electronics Association has expanded its sustainability initiative for its resources, standards, and intelligence.

Evolve serves as the go-to program for sustainability in electronics by convening experts, sharing success stories, and providing resources and tools to integrate sustainability practices into operations.

Why is Evolve important?

The Global Electronics Association asked the industry about sustainability, here's what we heard: Companies are investing in sustainability to increase their competitive edge, for operational efficiency, and to emerge as industry leaders. Companies also said they are looking for support and collaboration to drive sustainability progress.

Sustainability is about opportunity. The electronics industry has an unprecedented chance to drive innovation, improve operational efficiency, and meet the growing demand for sustainable products. Evolve is here to help our industry achieve progress in parallel with protecting the planet.

Dr. John W. Mitchell

Global Electronics Association
President & CEO

How will Evolve support the industry?

Sustainability Resources and Tools

Access industry-specific resources, including sustainability metrics, scholarly articles and video interviews, as well as other reporting frameworks to help measure progress and align with evolving regulations.

Industry Insights and Best Practices

Stay informed with data-driven insights, white papers, reports, case studies, and research in electronics manufacturing.

Community and Industry Collaboration

Join the conversation and connect with industry leaders, sustainability experts, regulators, engineers, designers, and manufacturers to accelerate collective action.

Implementation and Compliance Support

Get practical guidance to help businesses integrate sustainable practices, improve supplier engagement, optimize product lifecycles, and meet international regulatory requirements.
