

AUMOVIO: Transforming Automotive Expertise for the Future of Mobility

The automotive industry is entering a new era. Connected vehicles, artificial intelligence, electrification and advanced driver assistance systems are transforming how mobility is designed and manufactured. For **AUMOVIO**, this shift represents a new chapter - building on decades of automotive expertise while focusing on the technologies shaping the future of mobility.

With a presence spanning more than **80 locations worldwide**, the independent mobility technology company is focused on developing solutions that are **safe, exciting, connected and autonomous**. Its strategic direction, **“Lead. Transform. Deliver.”**, reflects this ambition.

OUR FOCUS AREA

Philippines: A Market on the Rise

A skilled workforce, strategic location and growing technical capabilities make the Philippines an attractive manufacturing hub and create opportunities to strengthen its role in the global mobility value chain.

Intelligent Mobility

AI is transforming mobility by enabling vehicles to perceive, analyze and respond to their environment, supporting faster decisions, predictive capabilities and enhanced automation.

Advanced Technologies

Opportunities ahead in areas such as advanced driver assistance systems (ADAS), electrification, connectivity solutions, smart manufacturing, and AI-enabled technologies.

A Sustainable Future

Sustainability is influencing the entire product lifecycle—from design and material selection to manufacturing and end-of-life, with greater focus on energy efficiency, responsible resource use, waste reduction and circularity.

QUALITY BUILT ON STANDARD

IPC training and certification programs play a vital role in strengthening our technical competencies and quality culture.

Certifications such as IPC-A-610 and IPC-7711 help our teams build the knowledge and skills needed for consistent quality, compliance, defect prevention and audit readiness across our operations.

IPC-A-610
Acceptability of
Electronic Assemblies

IPC-7711
Rework, Modification
and Repair of
Electronic Assemblies

Standards transform expertise into excellence. Through IPC standards and the Global Electronics Association, we strengthen quality, foster innovation, and create opportunities that advance the entire electronics industry. At AUMOVIO, we believe that standards unite us, quality defines us, and collaboration strengthens us, enabling us to build a high-performing organization that delivers reliable solutions, drives continuous improvement, and contributes to a stronger and more sustainable electronics manufacturing industry.

This focus on standards is complemented by the company's membership of **Global Electronics Association**. Through the Association, it gains opportunities to collaborate with industry peers, exchange knowledge, follow emerging trends and access internationally recognized standards and best practices. This connection provides a broader platform for **professional development, industry collaboration and alignment with evolving manufacturing requirements**.

As the mobility industry moves forward, the journey is ultimately about more than technology. **It is about combining capable people, consistent standards and strong industry collaboration to turn new possibilities into safe, reliable and sustainable mobility solutions.**
